Spain - Remote

CORE SKILLS

PRODUCT & UX

Product Discovery | User Flows | Feature Scope | MVP Thinking | UX Structure | Interface States | Product QA | Backlog Thinking

WEB & CMS

Web Product Pages | Reusable CMS Systems | Landing Pages | Website Themes | Custom Modules | HubSpot CMS | WordPress | HubL

FRONTEND

HTML5 | CSS3 | Responsive Layout | Basic JavaScript | Basic React

GROWTH & RESEARCH

On-page SEO | Technical SEO | User Intent | Semantic Research | Content Structure | Traffic Analysis | GA4 Analysis | GSC Analysis | Conversion Thinking | Growth Experiments

ANALYTICS & DATA

SQL Basics | Product Metrics | CR / CAC / LTV / ARPU | Data Collection Logic | Funnel Thinking | Reporting

AI WORKFLOW

AI-assisted Product Building | Codex Workflows | Prompt Writing

Maria Dolenko

Junior Product Manager | Web Product Specialist | SEO + AI-assisted Product Delivery

Product-minded Web Specialist with 8 years of SEO experience, 3+ years owning and developing a SaaS marketing website, and hands-on product ownership across pet projects. Strong in user flows, product logic, UX structure, web/CMS systems, landing pages, HTML/CSS, content structure, technical SEO, analytics, and AI-assisted delivery. I connect user needs, business goals, data signals, and implementation details: from idea and feature scope to web/product delivery, QA, optimization, and iteration.

EXPERIENCE

Agromega - Product Owner / AI-assisted Product Builder

Pet Project | Remote | Apr 2026-present | Agriculture web product

- Designed an early-stage plant diary and planner product from scratch, including business processes, user flows, feature scope, data logic, and UX details.
- Defined what data should be collected, where it comes from, how it is connected, and how it should be displayed across dashboards, diary cards, history timelines, and plant profiles.
- Owned product logic for active/archive plant states, weekly actions, attention signals, care history, AI advice, filters, tags, and quick actions.
- Worked on product architecture for plant knowledge, including categories, varieties, diseases, pests, care topics, and symptom-based user paths.
- Used AI/Codex workflows to turn product ideas into working features: writing clear prompts, breaking down tasks, reviewing implementation, testing flows, and iterating while keeping product ownership and final decisions.

Wizer - Web Product / CMS Specialist

Remote | 2022-2025 | Cybersecurity education SaaS

- Owned and maintained a HubSpot-based marketing website in a remote international startup environment.
- Built a new HubSpot website theme from scratch using HubL, HTML, CSS, and basic JavaScript, without AI assistance.
- Created around 30 reusable HubSpot CMS modules manually, designed for flexible use across different page types instead of one-off module duplication.
- Created and supported around 50 landing pages, website pages, templates, and reusable sections for marketing needs.
- Reduced dependency on developers by building drag-and-drop editing workflows so content managers could create and update pages independently.
- Improved website structure, template maintainability, user-facing page logic, and content update workflows for a small marketing team.
- Supported SEO implementation and website analytics: metadata, page structure, internal linking, technical fixes, content updates, GA/GSC checks, and performance monitoring.
- Collaborated with a marketing director, two content managers, and a designer to ship website improvements and product-related pages.

Taras Shevchenko National University of Kyiv
Faculty of Economics
Bachelor, 2011-2014
Master, 2014-2016

LEARNING

Front-End Path, Codecademy
Learn SQL, Codecademy
SQL for Marketers and Product Managers, Codecademy
HubSpot CMS for Developers, HubSpot Academy

SEO Specialist - In-house

Ukraine | 2015-2022

- Led SEO work across e-commerce, niche, and highly competitive projects.
- Grew from Junior to Senior SEO Specialist and gained team management experience.
- Analyzed project performance using Google Analytics, Google Search Console, traffic dynamics, CTR, impressions, rankings, landing page performance, and content effectiveness.
- Worked with semantic research, on-page SEO, technical audits, content planning, competitor analysis, reporting, and growth strategy.
- Translated SEO and analytics insights into practical website actions: content updates, structure improvements, technical fixes, internal linking, and landing page optimization.
- Built scalable SEO structures for websites and content projects with a focus on organic traffic growth.

SELECTED PROJECTS

Reusable Marketing Website System - Wizer
Built a custom website theme and reusable CMS module system for a cybersecurity education SaaS website.

Reusable CMS Modules
Developed around 30 reusable HubSpot CMS modules manually, without AI assistance, for landing pages and marketing pages, improving page creation speed, consistency, and content-manager autonomy.

Agromega Product Work
Owned the product concept, business logic, UX flows, data presentation, frontend iteration, and Codex-assisted development workflow for a plant diary and planner.

Luna Cycle-life Calendar
Created a mobile-first product concept from idea to implementation, covering cycle logic, daily planning, nutrition flow, fasting timer, mood and water tracking, interface states, and AI-assisted frontend iteration.

WHAT I BRING

- Product mindset: ability to turn unclear ideas into user flows, feature scope, interface logic, and practical next steps.
- Hands-on web delivery skills: CMS, landing pages, reusable modules, HTML/CSS, QA, and implementation details.
- Analytics foundation from SEO and web work: GA4, Google Search Console, traffic analysis, CTR, landing page performance, reporting, and conversion-oriented improvements.
- Understanding of product/growth metrics, data collection logic, funnels, and business metrics such as CR, CAC, LTV, and ARPU. I have not owned deep product analytics reporting yet, but I understand how data should support product and growth decisions and am actively strengthening SQL/product analytics practice.
- AI-assisted working style: able to use LLM/Codex workflows to research, break down tasks, build, test, iterate, and validate faster.
